1. Project Overview

AT-BMS HousingOS is a browser-based Building and Society Management System for gated communities, apartment complexes, housing societies, and commercial buildings. It centralizes resident records, property units, billing, payments, complaints, visitor access, documents, notices, assets, vendors, audit logs, and management reporting.

System Type

Multi-tenant web application that can run many societies on one platform while keeping each society's data separate.

Frontend

React application using TanStack Router, role-aware navigation, dashboard screens, tables, forms, and status panels.

Backend

TanStack Start server functions handle authentication, database reads, writes, permissions, module gates, and business workflows.

Database

MySQL stores users, tenants, property hierarchy, ledger entries, payments, complaints, security logs, and operational data.

2. Access and Login

1. Open the application URL in a browser, for example `http://localhost:5173/`.
2. Enter the registered email address and password on the login page.
3. The system validates the credentials, creates a secure session, and loads the user's profile.
4. The sidebar and dashboard are generated according to the user's roles, permissions, active modules, and active society.
5. If a user manages multiple societies, they should confirm the selected active society before entering or updating records.
6. Use logout when work is complete so the session is closed safely.

Important: Users should never share accounts. Every admin, resident, guard, finance user, and technician should work from their own assigned login.

3. User Roles

Role	Scope	Main Responsibilities
Super Admin	Entire platform	Create societies, configure platform modules, manage global settings, view audit logs, and supervise all tenants.
Society Admin	Assigned society or societies	Manage property structure, residents, users, complaints, notices, society settings, documents, and operations.
Finance Head	Society finance	Create charge heads, run billing, record payments, reconcile ledgers, manage budgets, and produce financial reports.
Resident / Owner	Own unit	View bills, submit complaints, register visitors, read notices, participate in forum, vote in polls, and access documents.
Tenant	Rented unit	Use unit-level resident services such as complaints, notices, visitor passes, and allowed community features.
Guard	Gate and security	Verify visitor passes, record entry and exit, check blacklist records, update gate logs, and record patrol information.
Technician	Maintenance operations	View assigned work orders, update job status, add notes, consume inventory, and mark work as completed.

4. Complete System Flow

1. Society Setup

Super Admin creates a tenant and assigns modules.

2. Property Setup

Blocks, buildings, floors, and units are created.

3. User Setup

Admins, residents, guards, technicians, and finance users are assigned.

4. Daily Operations

Billing, payments, complaints, visitors, notices, and assets are managed.

5. Review and Audit

Reports, dashboards, and audit logs are used for control.

Core Data Hierarchy

Society / Tenant -> Block -> Building -> Floor -> Unit -> Resident

The tenant is the highest level of separation. A society owns its property tree, users, residents, financial records, complaints, visitors, documents, and reports. Unit-level records such as residents, bills, payments, and complaints should always be linked to the correct unit so reports and dashboards remain accurate.

5. Daily Operating Flows

Monthly Billing Flow

Set charge heads, run monthly charges, review generated ledger entries, record resident payments, then export statements or reports.

Complaint Flow

A resident submits a complaint, admin reviews it, priority/status is set, technician is assigned, work is completed, and the ticket is closed.

Visitor Flow

A resident creates a visitor pass, the guard verifies it at the gate, entry is recorded, exit is recorded, and blacklist checks protect the society.

Notice Flow

Admin writes an announcement, publishes it to the notice board, residents read it, and notifications can alert relevant users.

6. Module-by-Module Guide

Each module below includes its route, purpose, who normally uses it, and the full operating flow.

Screenshot rule: every module should have one clear screenshot showing the live page, the main table/list, and the primary action button or workflow state. Add all screenshots inside the `manual-images` folder using the exact names listed below.

Module	Image File	What the Screenshot Should Show
Dashboard	<code>manual-images/module-dashboard.png</code>	Main dashboard cards, sidebar, active society, and recent activity.
Platform Core	<code>manual-images/module-platform.png</code>	Platform overview, tenant status, or global admin controls.
Societies	<code>manual-images/module-societies.png</code>	Society list, create society button, plan/status badges, and admin mapping.
Property	<code>manual-images/module-property.png</code>	Property hierarchy with blocks, buildings, floors, units, and unit status.
Residents	<code>manual-images/module-residents.png</code>	Resident list or resident form with unit assignment visible.
Ledger	<code>manual-images/module-ledger.png</code>	Unit ledger entries, charge heads, debit/credit values, and balance.
Payments	<code>manual-images/module-payments.png</code>	Payment entry form, payment table, receipt/reference, and amount.
Financial Transparency	<code>manual-images/module-transparency.png</code>	Income and expense summary visible to residents or management.
Budget	<code>manual-images/module-budget.png</code>	Budget categories, planned amount, actual amount, and variance.
Complaints	<code>manual-images/module-complaints.png</code>	Complaint list with status, priority, category, and assigned workflow.

Module	Image File	What the Screenshot Should Show
Maintenance	manual-images/module-maintenance.png	Work order list, technician assignment, due date, and job status.
Visitors	manual-images/module-visitors.png	Visitor pass creation or visitor pass list with verification code.
Gate Security	manual-images/module-gate-security.png	Gate terminal tab, entry/exit log, and pass verification state.
Guard Patrol	manual-images/module-guard-patrol.png	Patrol checkpoints, shift record, or incident update screen.
Blacklist	manual-images/module-blacklist.png	Blacklist list/form with restricted visitor or vehicle record.
Parking	manual-images/module-parking.png	Parking slots, vehicle plate, allocation status, and unit link.
Utility Meters	manual-images/module-utility-meters.png	Meter readings, previous/current reading, consumption, and charge.
Vendors	manual-images/module-vendors.png	Vendor registry, service category, contact details, and active status.
Vendor Finance	manual-images/module-vendor-finance.png	Vendor invoice, purchase order, approval, or payment status.
Inventory	manual-images/module-inventory.png	Stock item list, quantity, reorder level, and stock movement.
Projects	manual-images/module-projects.png	Project board, milestones, progress, budget, or task status.
Assets	manual-images/module-assets.png	Asset register with serial number, location, vendor, and maintenance status.
Notice Board	manual-images/module-notices.png	Published notices, priority/category, and create notice action.

Module	Image File	What the Screenshot Should Show
Community Forum	manual-images/module-forum.png	Forum thread list, replies, author, and discussion category.
Polls	manual-images/module-polls.png	Poll question, options, vote count, closing date, and result state.
Events	manual-images/module-events.png	Event calendar/list, event details, date/time, and RSVP state.
Amenities	manual-images/module-amenities.png	Amenity list, booking date/time, availability, and approval state.
Governance	manual-images/module-governance.png	Meeting list, agenda, resolutions, status, and documents if available.
Documents	manual-images/module-documents.png	Document repository, category, upload action, and access/expiry data.
Notifications	manual-images/module-notifications.png	Notification list, unread/read status, title, and linked action.
Reports	manual-images/module-reports.png	Report filters, generated report preview, export or print action.
Analytics	manual-images/module-analytics.png	Charts, trends, KPI filters, and management summary.
Audit Log	manual-images/module-audit-log.png	Audit table with user, module, action, timestamp, and filters.
Settings	manual-images/module-settings.png	Society settings, module activation, or configuration screen.
Forms Catalog	manual-images/module-forms.png	Forms catalog with module forms and form count/list.
AI Maintenance	manual-images/module-ai-maintenance.png	AI maintenance analysis, risk cards, suggestions, or predicted asset state.

Dashboard

Image: Add `manual-images/cover-dashboard.png` showing the dashboard KPIs, sidebar, active society, and recent activity.

Purpose: Provides a role-based overview of the active society, including quick metrics, shortcuts, pending work, recent activity, and operational summaries.

Used by: Super Admin, Society Admin, Finance Head, Resident, Guard, and Technician.

- 1 Log in and confirm that the correct active society is selected.
- 2 Review key metrics such as units, residents, complaints, dues, payments, and recent notices.
- 3 Use quick action cards to open the required module.
- 4 Check warning states such as overdue payments, open complaints, inactive modules, or pending approvals.
- 5 Return to the dashboard after completing work to confirm that counts and statuses are updated.

Image: Add `manual-images/module-platform.png` showing platform overview, tenant status, or global admin controls.

Purpose: Controls global platform-level functions such as tenant oversight, platform health, security overview, and high-level system administration.

Used by: Super Admin.

- 1 Open the platform page using a Super Admin account.
- 2 Review global platform status, tenant activity, and module coverage.
- 3 Open society management when a new tenant must be created or updated.

- 4 Check audit or security areas for suspicious administrative activity.
- 5 Apply platform-level configuration only after verifying its impact on societies.

Image: Add `manual-images/module-societies.png` showing society list, create society button, plan/status badges, and admin mapping.

Purpose: Creates and manages societies as tenants. Each society has its own data scope, plan, modules, admins, and operational records.

Used by: Super Admin and authorized administrative users.

- 1 Open the societies page and review the list of existing societies.
- 2 Create a new society by entering its name, slug, plan, address, and administrative information.
- 3 Assign the initial society admin account and verify the admin email.
- 4 Activate required modules for the society according to its plan.
- 5 Save the society, switch into its context, and begin property setup.

6 Deactivate or lock a society only when access must be suspended.

Image: Add `manual-images/module-property.png` showing blocks, buildings, floors, units, and unit status.

Block A (Askari Heights & Towers)

Purpose: Builds the physical property hierarchy of the society: blocks, buildings, floors, and units.

Used by: Society Admin and authorized property staff.

- 1 Select the correct active society before adding property records.
- 2 Create blocks or phases that represent physical areas of the society.
- 3 Add buildings or towers under the correct block when the society has vertical structures.
- 4 Create floors under each building if the property has multi-floor units.
- 5 Create units with unit number, type, size, status, and parent location.
- 6 Update unit status when it becomes vacant, occupied, under renovation, or locked.

7

Confirm that every resident, bill, complaint, and meter is linked to the correct unit.

Residents

/residents

Image: Add `manual-images/module-residents.png` showing the resident list or resident form with unit assignment visible.

Purpose: Maintains owner, tenant, occupant, contact, identity, and unit assignment records.

Used by: Society Admin, resident management staff, and authorized admins.

- 1 Open the residents module and search for the unit or existing resident.
- 2 Create a resident profile with name, contact details, identity details, and emergency information.
- 3 Select resident type such as owner, tenant, or occupant.
- 4 Assign the resident to the correct unit and confirm occupancy dates if available.
- 5 Create or link the resident login account when portal access is required.

- 6 Update the record when a resident moves out, ownership changes, or contact information changes.

Image: Add `manual-images/module-ledger.png` showing unit ledger entries, charge heads, debit/credit values, and balance.

Showing 1 to 3 of 3 transactions

Purpose: Tracks unit-level debit and credit transactions, charge heads, running balances, and resident statements.

Used by: Finance Head, Society Admin, and authorized finance staff.

- 1 Create or review charge heads such as maintenance fee, utility fee, security fee, rent, penalties, or adjustments.
- 2 Run monthly charges for the selected billing period.
- 3 Review generated ledger entries by unit, date, charge head, and balance.
- 4 Apply manual adjustments only when there is a verified reason.
- 5 Open a unit ledger to check the complete statement history.
- 6 Use reports to export outstanding dues, paid units, and account statements.

Purpose: Records resident payments and applies credits against outstanding ledger balances.

Used by: Finance Head, cashier, Society Admin, and authorized payment staff.

- 1 Search for the resident or unit receiving the payment.
- 2 Enter amount, payment method, date, bank/reference number, and notes.
- 3 Submit the payment and verify that the ledger balance is reduced correctly.
- 4 Generate or print the payment receipt if required.
- 5 Reconcile daily payments with bank or cash records.

- 6 Correct payment mistakes through approved adjustments rather than deleting audit-sensitive records.

Financial Transparency

/financial-transparency

Image: Add `manual-images/module-transparency.png` showing society income, expenses, totals, and selected period.

Purpose: Shows society-level income and expense information in a transparent format for residents and management.

Used by: Society Admin, Finance Head, and residents with permission.

- 1 Open the transparency page for the active society.
- 2 Select the date range, month, or financial period.
- 3 Review income categories such as maintenance collections and other receipts.
- 4 Review expense categories such as vendor payments, repairs, security, utilities, and projects.
- 5 Publish or share the summary according to society policy.

Budget

[/budget](#)

Image: Add `manual-images/module-budget.png` showing budget categories, planned amount, actual amount, and variance.

Budget Screenshot		manual-images/module-budget.png	
Approved Society Budget 2026-27 ▾		+ Add Item Category	Plan Annual Budget
TOTAL BUDGET ALLOCATED Rs41,000,000.00		ACTUAL EXPENDITURES Rs24,900,000.00	VARIANCE MARGIN Rs16,100,000.00
CATEGORY	PLANNED ALLOCATION	ACTUAL SPENT	VARIANCE
Janitorial & Waste Management	₹3,500,000.00	₹2,100,000.00	60%
Horticulture, Parks & Landscaping	₹2,200,000.00	₹1,400,000.00	64%
Capital Improvements & Road Works	₹6,000,000.00	₹3,100,000.00	52%
Water Filtration & Tubewell Power	₹3,800,000.00	₹2,400,000.00	63%
Generator Fuel & Heavy Power	₹8,500,000.00	₹5,200,000.00	61%
Security & Guard Operations	₹12,500,000.00	₹7,800,000.00	62%
Lifts & Elevator AMC Maintenance	₹4,500,000.00	₹2,900,000.00	64%

Purpose: Plans expected income and expenses and compares the budget with actual financial activity.

Used by: Finance Head, Society Admin, and committee users.

- 1 Create the annual or monthly budget period.
- 2 Add planned income and expense categories.
- 3 Enter approved amounts for each category.
- 4 Compare actual ledger or vendor spending against budgeted values.
- 5 Review variance and take approval when spending exceeds the plan.

Complaints

/complaints

Image: Add `manual-images/module-complaints.png` showing complaint list with status, priority, category, and assignment workflow.

Purpose: Allows residents to submit issues and allows staff to track, assign, resolve, and close complaints.

Used by: Residents, Society Admin, technicians, and support staff.

- 1 Resident creates a complaint with title, description, category, unit, and priority.
- 2 Admin reviews the complaint and confirms the correct category and severity.
- 3 Admin changes status from open to in progress when work begins.
- 4 Technician or staff adds comments, progress notes, and completion details.
- 5 Admin marks the complaint resolved after confirmation.

6

Resident or admin closes the ticket when the issue is fully completed.

Image: Add manual-images/module-maintenance.png showing work orders, technician assignment, due date, and job status.

Purpose: Converts operational issues into work orders and manages preventive maintenance schedules.

Used by: Society Admin, maintenance supervisor, technicians, and asset staff.

- 1 Create a work order from a complaint or from planned maintenance.
- 2 Assign technician, asset, location, due date, and estimated cost.
- 3 Technician updates job status and adds work notes.

- 4 Inventory usage is recorded if spare parts are consumed.
- 5 Supervisor verifies completion and closes the work order.
- 6 Recurring schedules are reviewed to prevent missed maintenance tasks.

Visitors

Show Pass

Purpose: Manages pre-registered visitor passes and prepares guard verification at the gate.

Used by: Residents, guards, and Society Admin.

- 1 Resident creates a visitor pass with visitor name, visit date, vehicle details, and expected time.
- 2 The system generates a pass code or verification record.
- 3 Guard searches or scans the pass at the gate.
- 4 Guard verifies that the pass is valid and not expired.

5 Gate entry is recorded with time, gate, visitor, and action type.

6 Exit is recorded when the visitor leaves the society.

Image: Add `manual-images/module-gate-security.png` showing gate terminal tab, entry/exit log, and pass verification state.

Purpose: Tracks gate terminals, entry and exit activity, gate verification, and security desk operations.

Used by: Guards, security supervisor, and Society Admin.

- 1 Open the gate tab from the security module.
- 2 Select the active gate or terminal if multiple gates are available.
- 3 Verify visitor pass, resident vehicle, staff entry, or manual entry request.
- 4 Record entry or exit with time and action type.

- 5 Review daily gate logs for missing exit records or suspicious activity.

Guard Patrol

</security?tab=patrols>

Image: Add `manual-images/module-guard-patrol.png` showing patrol checkpoints, shift record, or incident update screen.

27/08/2026, 10:00:00

Purpose: Records guard patrol rounds, checkpoints, incidents, and security coverage.

Used by: Guards and security supervisor.

- 1 Open the patrol tab and select the current shift or patrol route.
- 2 Record checkpoint visits as the guard completes each round.
- 3 Add incident notes if something unusual is found.
- 4 Supervisor reviews missed checkpoints and late patrols.
- 5 Patrol records are used for security reporting and accountability.

Blacklist

</security?tab=blacklist>

Image: Add `manual-images/module-blacklist.png` showing blacklist list/form with restricted visitor or vehicle record.

visitor

Usman Tariq

Disorderly conduct at community banquet hall

28/08/2026

Purpose: Maintains restricted visitors, vehicles, phone numbers, or other identifiers that must be checked at entry.

Used by: Security supervisor, guards, and Society Admin.

- 1 Add a blacklist record with type, value, reason, and notes.
- 2 Mark the record active when it must block or warn gate staff.
- 3 During visitor verification, check the entered name, phone, CNIC, or vehicle plate.
- 4 If a match is found, follow society security policy before allowing entry.
- 5 Deactivate a blacklist record only after authorized review.

Image: Add `manual-images/module-parking.png` showing parking slots, vehicle plate, allocation status, and unit link.

Purpose: Manages parking slots, vehicles, allocations, visitor parking, and availability.

Used by: Society Admin, security staff, and authorized residents.

- 1 Create parking zones and slots with slot number and status.
- 2 Register resident vehicles with plate number and owner/unit details.
- 3 Assign a slot to a unit or vehicle.
- 4 Update slot status when it becomes available, occupied, reserved, or blocked.
- 5 Use parking reports to review allocation conflicts or unauthorized vehicles.

Image: Add `manual-images/module-utility-meters.png` showing meter readings, previous/current reading, consumption, and charge.

Purpose: Records unit meter readings and converts utility consumption into charges.

Used by: Finance Head, meter reader, Society Admin, and utility staff.

- 1 Create or verify meter records for units.
- 2 Enter current reading for the billing period.
- 3 Compare with previous reading to calculate consumption.
- 4 Apply rate rules to calculate utility charges.
- 5 Post charges into the ledger or review them before final billing.

- 6 Use reports to identify abnormal usage or missing readings.

Vendors

/vendors

Image: Add `manual-images/module-vendors.png` showing vendor registry, service category, contact details, and active status.

Purpose: Maintains vendor and contractor profiles used for procurement, maintenance, invoices, and service history.

Used by: Society Admin, procurement staff, finance staff, and maintenance supervisor.

- 1 Add vendor name, service category, contact details, address, tax details, and notes.
- 2 Attach documents such as contracts, licenses, or service agreements if needed.
- 3 Use vendor records when creating work orders, purchase orders, or invoices.
- 4 Track vendor performance, payment status, and active/inactive status.

- 5 Update vendor information when contracts or contact details change.

Image: Add `manual-images/module-vendor-finance.png` showing vendor invoice, purchase order, approval, or payment status.

Purpose: Manages purchase orders, vendor invoices, approvals, and vendor payments.

Used by: Finance Head, procurement staff, and Society Admin.

- 1 Select the vendor and create a purchase or invoice record.
- 2 Enter amount, invoice date, due date, tax, reference number, and service details.
- 3 Submit for review or approval according to society policy.
- 4 Record payment when the invoice is paid.
- 5 Use vendor finance reports to track unpaid invoices and spending by category.

Image: Add `manual-images/module-inventory.png` showing stock item list, quantity, reorder level, and stock movement.

Purpose: Tracks spare parts, maintenance material, stock quantity, stock movement, and reorder requirements.

Used by: Maintenance supervisor, store staff, technicians, and Society Admin.

- 1 Create inventory items with name, SKU, category, unit, reorder level, and quantity.
- 2 Record stock-in when material is purchased or received.
- 3 Record stock-out when material is used in a work order.
- 4 Monitor low-stock alerts and reorder levels.

5

Reconcile physical stock with system stock at regular intervals.

Image: Add `manual-images/module-projects.png` showing project board, milestones, progress, budget, or task status.

Purpose: Tracks capital projects, society improvements, milestones, tasks, costs, and progress.

Used by: Society Admin, committee members, project manager, and finance users.

- 1 Create a project with title, description, budget, timeline, and responsible person.
- 2 Add milestones and tasks for execution tracking.
- 3 Update progress as work is completed.

- 4 Record project expenses or link vendor invoices if supported.
- 5 Review project status, budget usage, delays, and completion notes.

Image: Add `manual-images/module-assets.png` showing asset register with serial number, location, vendor, and maintenance status.

Purpose: Maintains a register of society equipment such as generators, lifts, pumps, CCTV, barriers, furniture, and tools.

Used by: Society Admin, maintenance supervisor, asset staff, and finance users.

- 1 Add an asset with name, category, serial number, purchase date, value, vendor, location, and status.
- 2 Attach warranty, AMC, invoice, or inspection documents when available.

- 3 Schedule maintenance or inspection against the asset.
- 4 Link work orders to the asset for service history.
- 5 Update status when the asset is active, under repair, retired, or replaced.

Notice Board

/notices

Image: Add `manual-images/module-notices.png` showing published notices, priority/category, and create notice action.

Notice Board Screenshot

`manual-images/module-notices.png`

Purpose: Publishes official society announcements, circulars, alerts, and resident-facing updates.

Used by: Society Admin and residents.

- 1 Create a notice with title, body, category, priority, and publishing date.
- 2 Select visibility according to audience, such as all residents or specific society groups.
- 3 Publish the notice so it appears on the notice board.
- 4 Residents open the notice board and read current announcements.

5

Archive old notices when they are no longer active.

Community Forum

/forum

Image: Add `manual-images/module-forum.png` showing forum thread list, replies, author, and discussion category.

Purpose: Provides discussion threads where residents and admins can communicate about society matters.

Used by: Residents, Society Admin, and moderators.

- 1 Create a forum thread with title, category, and message body.
- 2 Residents reply to the thread according to permissions.
- 3 Admins or moderators review inappropriate content if required.
- 4 Useful discussions remain open while completed or irrelevant threads can be closed or archived.

Polls

/polls

Image: Add `manual-images/module-polls.png` showing poll question, options, vote count, closing date, and result state.

Purpose: Runs resident surveys, committee questions, and voting workflows.

Used by: Society Admin, committee users, and residents.

- 1 Create a poll with question, answer options, eligibility, and closing date.
- 2 Publish the poll to eligible residents.
- 3 Residents submit their votes once according to the poll rules.
- 4 Admin reviews vote counts and final result after closing.
- 5 Poll results may be used for governance decisions or resident feedback.

Events

/events

Image: Add `manual-images/module-events.png` showing event calendar/list, event details, date/time, and RSVP state.

Purpose: Manages society events, schedules, attendance, and resident communication.

Used by: Society Admin and residents.

- 1 Create an event with title, description, venue, start time, end time, and capacity.
- 2 Publish the event on the event calendar.
- 3 Residents view the event and submit RSVP if available.
- 4 Admin monitors attendance and updates event status.
- 5 Past events remain available for record keeping if required.

Amenities

/amenities

Image: Add `manual-images/module-amenities.png` showing amenity list, booking date/time, availability, and approval state.

Askari Executive Banquet Hall	Air Cdre. (R) Javed Jahangir	12/09/2026	18:00 - 22:00	APPROVED

Purpose: Manages bookable society facilities such as halls, gyms, pools, courts, and shared rooms.

Used by: Residents, Society Admin, and facility staff.

- 1 Create amenities with name, capacity, booking rules, charges, and available slots.

- 2 Resident selects an amenity and requests a booking date/time.
- 3 System checks availability and prevents conflicting bookings.
- 4 Admin approves, rejects, or confirms the booking according to society policy.
- 5 Any booking charge can be recorded or connected to finance workflow if enabled.

Image: Add `manual-images/module-governance.png` showing meeting list, agenda, resolutions, status, and documents if available.

Governance Screenshot

`manual-images/module-governance.png`

Purpose: Tracks committee meetings, AGM records, resolutions, decisions, and governance history.

Used by: Society Admin, committee users, and authorized residents.

- 1 Create a meeting record with title, date, agenda, and participants.
- 2 Add meeting notes and decisions.
- 3 Create resolutions with status such as proposed, approved, rejected, or completed.
- 4 Link related documents or notices where needed.
- 5 Review governance history for audit and resident transparency.

Documents

Purpose: Generates operational and financial summaries for decision making, audits, and record keeping.

Used by: Society Admin, Finance Head, Super Admin, and authorized users.

- 1 Open the reports module and choose the required report type.
- 2 Select society, date range, status, category, or module filters.
- 3 Generate the report and review the result on screen.
- 4 Export or print the report if the option is available.

- 5 Use reports during monthly review, audit, committee meetings, and reconciliation.

Image: Add `manual-images/module-analytics.png` showing charts, trends, KPI filters, and management summary.

Purpose: Provides trend analysis and visual summaries for society performance.

Used by: Super Admin, Society Admin, and management users.

- 1 Open analytics from the admin navigation.
- 2 Review trends such as collections, complaints, occupancy, security activity, and expenses.
- 3 Apply filters for society, month, status, or category when available.

- 4 Use insights to identify delays, high-cost areas, and operational pressure points.

Purpose: Records important administrative actions for security, accountability, and investigation.

Used by: Super Admin, Society Admin, and authorized auditors.

- 1 Open audit log from admin navigation.
- 2 Filter by user, module, action, society, or date range.
- 3 Review who performed an action, when it happened, and which module was affected.
- 4 Investigate unexpected edits, permission changes, billing actions, or access issues.

5

Export or preserve audit evidence according to policy.

Update Password

Purpose: Manages society configuration, module activation, role permissions, and operational preferences.

Used by: Society Admin and Super Admin.

- 1 Open settings with an administrative account.
- 2 Review society profile, module settings, and role permission sections.
- 3 Enable or disable modules according to the society plan and policy.

- 4 Configure role permissions such as view, create, edit, and delete access.
- 5 Save changes and refresh the browser if permission caches need to update.
- 6 Test with a lower-role user to confirm that the correct menus and actions appear.

Image: Add `manual-images/module-forms.png` showing forms catalog with module forms and form count/list.

Forms Catalog Screenshot

manual-images/module-forms.png

DESIGN LIBRARY

Every form, every module.

Each form is generated from a typed registry, so the experience stays consistent across categories. Inactive modules hide their forms automatically.

platform/support-ticket · 5 fields

Purpose: Shows available dynamic forms by module and helps users access structured data entry screens.

Used by: Admins and module operators.

- 1 Open the forms catalog.
- 2 Select the module that contains the required form.
- 3 Open the form and enter required fields.

- 4 Submit the form and review success or validation messages.
- 5 Return to the relevant module list to confirm that the new record appears.

Image: Add manual-images/module-ai-maintenance.png showing AI maintenance analysis, risk cards, suggestions, or predicted asset state.

Purpose: Provides maintenance prediction or analysis views for equipment and operational issues. Current project documentation indicates that AI prediction behavior may be placeholder or mock-only until a real AI service is connected.

Used by: Society Admin, maintenance supervisor, and management users.

- 1 Open AI Maintenance from the sidebar when the module is active.
- 2 Review predicted risk, suggested maintenance, or highlighted assets.
- 3 Compare suggestions with actual maintenance records and asset condition.
- 4 Create work orders manually where a real inspection is required.

- 5 Treat AI output as decision support, not as final approval, until production integration is complete.

7. Common Forms and Actions

Create

Adds new records such as societies, units, residents, bills, payments, complaints, visitors, notices, vendors, assets, or documents.

Edit

Updates existing records. Edit access depends on the user's role and module permissions.

Delete / Disable

Critical operational and finance records should usually be closed, archived, reversed, or deactivated instead of permanently deleted.

Search / Filter

Large modules should be filtered by society, unit, date range, status, category, resident, vendor, or module.

Standard Form Flow

1. Open the relevant module from the sidebar.
2. Click the create or edit action.
3. Enter all required fields and verify linked records such as society, unit, resident, vendor, or asset.
4. Submit the form and check validation errors if the form does not save.
5. Confirm that the record appears in the list and that related dashboards or reports update correctly.

8. Security and Permissions

- Every request is resolved through the active authenticated session.
- Tenant-scoped records must be filtered by `tenant_id` so one society cannot access another society's data.
- The sidebar hides modules when the user has no view permission or when the module is inactive for that society.
- Role permissions can control `can_view`, `can_create`, `can_edit`, and `can_delete`.
- Module activation gates prevent disabled modules from being used even if the route is opened directly.
- Audit logs preserve important administrative actions for accountability.
- Production passwords, database credentials, and API keys should never be written in public manuals.

Security rule: Always test permission changes using a lower-privilege account before handing access to real users.

9. Reports and Exports

Reports help management review operations, finance, security, and service performance.

- Resident directory report
- Unit occupancy report
- Ledger statement report
- Payment collection report
- Outstanding dues report
- Budget variance report
- Complaint status report
- Maintenance work order report
- Visitor entry and exit report
- Parking allocation report
- Inventory stock report
- Vendor invoice report
- Asset register report
- Audit log report

Reporting Flow

1. Select the report type.
2. Apply filters such as date range, society, unit, status, category, or user.
3. Generate the report and review totals before sharing.
4. Export or print the report where the system provides that option.
5. Use audit-sensitive reports only for authorized review.

10. Mobile App

The project also includes a Flutter mobile application. The mobile app focuses on resident login, resident dashboard access, and maintenance-related screens. It can be used by residents and maintenance users for quick access to day-to-day services.

1. User opens the mobile app and logs in with assigned credentials.
2. The app loads the user's role and society context from the backend.
3. Resident dashboard shows relevant bills, complaints, notices, and quick actions.
4. Maintenance dashboard shows assigned tasks and work order status where available.
5. Changes made from mobile should sync with the main web database through the API service.

Mobile App Screens

manual-images/09-mobile-app.png

Image Placeholder

Add mobile screenshots as `manual-images/09-mobile-app.png`

11. Troubleshooting

Issue	Likely Reason	Solution
Login fails	Wrong password, inactive user, database issue, or session issue	Verify credentials, confirm user status, and check that the application server and database are running.
Menu item is missing	User lacks permission or the module is inactive for the society	Check Settings, RBAC permissions, and module activation for the active tenant.
Expected records do not appear	Wrong active society or tenant scope	Use the society switcher and confirm that the correct society is selected.
Payment does not change balance	Payment was entered against the wrong unit or ledger refresh is pending	Verify unit, payment record, and refresh the ledger/report screen.
Upload is rejected	File type is blocked or invalid	Use an allowed document type and avoid executable/script files.
Manual image does not display	File is missing or the file name does not match	Add the image inside <code>manual-images</code> using the exact file name listed above.

Printed from AT-BMS HousingOS Complete User Manual.
